BAUER Technologies BIM Policy

BAUER Technologies Limited (BTL) is part of the BAUER Group, a world leading provider of geotechnical engineering services and solutions.

BAUER Technologies Limited delivers a comprehensive service from project inception through the design, and installation of geotechnical works. The scope of this policy covers all its UK operations.

The effective and efficient exchange of information lies at the heart of collaborative construction industry relationships and leaner, smarter delivery of projects to our customers.

Building Information Modelling (BIM) is a collaborative way of working, underpinned by digital technologies, which unlocks more efficient methods of designing, constructing and maintaining building and infrastructure assets. A key competitive advantage of BIM is its ability to promote greater transparency and collaboration between stakeholders & suppliers thereby reducing waste (procurement, process and material) through all levels of the supply chain.

The Board of BAUER Technologies Limited Board is committed to developing and implementing a BIM capability that will integrate part the way we and our Supply Chain deliver projects.

This commitment aims to achieve:

- An increased awareness and understanding of BIM across our organisation
- The development of a class leading BIM capability with the commensurate skills, experience and capacity
- Improved outcomes for all project stakeholders

BTL’s BIM Implementation Strategy, managed by a dedicated BIM resource, will detail the steps needed to further develop our people, processes, technology and relationships to achieve maturity to BIM Level 2, BS EN ISO 19650, 2019, Parts 1 & 2.

This policy will be reviewed annually, and be amended as appropriate. The policy will be communicated to all staff via the intranet and copies will be posted on permanent and site office noticeboards. It will be made available to members of the public via the BTL website and on request.
